OVERVIEW

Computer Science undergraduate with strong foundation in Core Java, including OOPs, Collections, Exception Handling, and Multithreading. Experienced in building backend systems using Spring Boot and REST APIs, with focus on writing clean, scalable, and maintainable code. Skilled in debugging, problem-solving, and designing modular architectures. Familiar with Agile development practices and version control. Actively solving DSA problems to strengthen analytical thinking.

EDUCATION

Chandigarh College of Engineering, Jhanjeri, Mohali <i>B.Tech in Computer Science and Engineering (Pursuing)</i>	2023 – 2027
Nowrosjee Wadia College Of Science, Pune <i>HSC (Class XII)</i>	2019 – 2021
MES's Utkarsha Eng. Med. College, Pune <i>SSC (Class X)</i>	2019

WORK EXPERIENCE

DefensIQ Tech Pvt. Ltd.

Chief Technology Officer (CTO)

Aug 2025 – Present

- Led backend development initiatives and contributed to system architecture design using Java and Spring Boot
- Managed and mentored development team, ensuring code quality, modular design, and adherence to best practices
- Oversaw API development, debugging, and deployment workflows for scalable applications
- Collaborated with cross-functional teams to define technical requirements and deliver product features

VentureNest

Technical Team Member

Sep 2024 – Apr 2025

- Contributed to startup-oriented technical projects and product development initiatives
- Assisted in system design, feature implementation, and debugging across multiple modules
- Worked in collaborative team environment following structured development practices

TRAINING

DefensIQ Tech Pvt.Ltd.

Android and backend Internship

6 Weeks

- Developed and integrated Java-based REST APIs for Android and web applications
- Implemented API integration, debugging, and validation workflows.
- Participated in testing and iterative improvements under senior guidance.
- Practiced code review and documentation aligning with SDLC principles.

Oasis Infobyte

Android Development Intern

Aug 2025 – Sep 2025

- Developed multiple Android applications using Java, including a calculator, unit converter, and time management app
- Applied object-oriented programming concepts and modular design for reusable components
- Implemented user-friendly UI and optimized application performance
- Tested and debugged applications to ensure reliability and smooth functionality

PROJECTS

Gita API — Spring Boot, Java, REST

- Designed and executed a RESTful API using Spring Boot to serve structured data with optimized request handling and modular architecture.
- Improved performance by organizing endpoints efficiently and reducing redundant data processing.
- Used Spring Boot for scalable backend architecture and efficient request handling
- Tested and validated API endpoints using Postman to ensure correctness and reliability of responses

Internal Project Insights Dashboard — Power BI, Excel

- Developed a Power BI dashboard to monitor ongoing project timelines and identify delays across multiple teams
- Analyzed historical task data to highlight recurring bottlenecks affecting delivery timelines
- Created custom KPIs to track completion rates and workload distribution across team members
- Refined raw datasets using Power Query to ensure consistency across multiple data sources
- Enabled quicker decision-making by presenting actionable insights to improve project planning

Customer Churn Prediction (Kaggle Playground) — Python, Machine Learning

- Developed a customer churn prediction model using the Kaggle Playground dataset, achieving a rank of 1865 in the first submission (before normalization)
- Performed end-to-end ML pipeline including data preprocessing, feature engineering, and handling categorical variables
- Trained and compared multiple models such as Logistic Regression, Random Forest, and XGBoost
- Evaluated models using precision, recall, and confusion matrix for better decision-making
- Integrated machine learning model with backend APIs for real-time predictions
- Wrote clean, modular, and maintainable code following best software engineering practices.

TECHNICAL SKILLS

Languages: Java, Python, C++

Backend Development: Spring Boot, RESTful APIs

Databases: MongoDB, MySQL, SQLite

Data & Analytics: Power BI, Data Visualization, Basic SQL Queries

Core Concepts: OOPs, Data Structures, Multithreading, Exception Handling

Tools: Git, GitHub, Postman

Development Practices: SDLC, Agile (Scrum), API Testing, Debugging

ACHIEVEMENTS

Solved 150+ data structures and algorithms problems on LeetCode, improving coding efficiency and problem-solving skills.

Practiced competitive programming consistently, strengthening algorithmic thinking and logical reasoning.

Showcased consistency in competitive programming with regular problem-solving practice

Led teams as School Commander, demonstrating leadership and coordination abilities.

CERTIFICATIONS

Deloitte Data Analyst Job Simulation (Forage)

- Performed real-world tasks involving software development, debugging, and business problem-solving
- Gained exposure to industry practices, workflows, and client-oriented solutions

MongoDB Basics — ICT Academy Learnathon

- Completed foundational training in MongoDB, including database design, CRUD operations, and data modeling
- Gained hands-on experience working with NoSQL databases and understanding real-world data storage solutions

Machine Learning Essentials for Business and Technical Decision Makers — Amazon Web Services (AWS)

- Learned core ML concepts and their application in business and technical environments
- Understood how machine learning supports data-driven decision-making and real-world use cases
